- * [Online Watermarker in PHP, Javascript, Cronjobs](#)
- * [Online time planner in PHP and Javascript.](#)
- * [Autosurf website in PHP, Javascript with AJAX in active development](#)
- * [My personal portfolio at \[www.ohlookaweb.com\]\(http://www.ohlookaweb.com\)](#)
- * [An arcade game website](#)

Online Watermarker “onlinewatermarks.com”

This was a personal project with the idea to earn money from advertisements. I created the system in my spare time and it allowed users both logged in and out to upload, watermark and download a watermarked version of their image.

Online Time Planner "My to do":

This was my own personal project that I worked on in my spare time to help me organize myself a bit more. I used PHP to allow users to create their own accounts and to store the `To do's` Everything was coded from scratch as this was more of a learning method than something that i wanted to monetize. I used cron jobs to edit the dates so they would display differently on the week view.

Autosurf website in PHP :

This is a website I was hired to do. I am still working with my client to create this website. My client wanted me to create a auto surf and traffic exchange website that would be user friendly and easy to monetize. I needed to use PHP to allow users to create accounts and add their websites to the rotation scheme. Captchas are used to make sure users don't cheat. I have used JavaScript and jQuery to create a "moving reel" of the users websites depending on the amount they have and their user level it will display whether they are allowed more websites or not.

My personal portfolio:

I created this in my own time and it was to advertise myself as a webdesign

and to get clients and jobs. I have used jQuery to make this a one page website. Php is used in the contact form and the login form for myself to organize clients.

OTHER ACTIVITIES & HOBBIES:

- * Web design
- * Surfing the internet
- * Video Games
